Initial Section

3D Model is turntable-ing.
Text and CTA's all slide as one(if required)

Section A: Images & Turntable Finish

Images keep scrolling (just maybe 2 / 4 here in an effort to keep the file size down a bit). At the end of this, we can run a reveal animation of the smaller 3D model as well as other images and not waste space doing so.

At the very end when the image is just only setting in place, the turntable model will reveal and replace the position the turntable is in and continue to turn in the direction it was towards.

On this frame, transition it to a top-down roof view, slightly angled to the right, place it on the left side of the composition.

The checkpoints can simply be the start and end of the animation, or you can do the start, end, transit and it reaches the desired position, angle, and zoom level.

Example:

Section B: General Overview

Add a general info about the car hint. The layout should be similar to the one in the Figma file (see above). The layout text should be like a car configurator, maximum ones like those that come from Stuttgart.

I still am a 24px margin all sides for this section. Based on the 3D model's position, the content should flow(add on one screen size to also always know how to position it on other screen sizes) so that there's something after the section. Like this one!

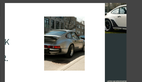

Image should have another cutout through reveal animation. Same as the 3D model in Section A.

Add parallax if you can to this image (like the ears) and for the transition to the next section's image as well.

Section C: Specs

The complete list of specs. The equipment, mods, and options should be in the Section D: Price Comparison section as overlay, but that's designer's call.

Notice how the image in previous screen has a "Scroll to next text" Make this a scroll to reveal text like right.

We have another 3D model transition here, from the top-down to the front view. Use the "Scroll to trigger" of the transition, when the dark section is almost exiting the frame but still has a little bit of 3 to create continuity.

This is how I envision this one. So from the top, rotate it and position the side while zooming. Make sure the 3D model is not touching the edges of the screen, while the body should be visible for around 3 quarters of the car and the tail should be out of the frame.

Section D: Price Comparison

This one compares the car price to similar marketplaces using Porsche's own Classic Marketplace. Maybe this is the one I made in Figma, but updated to real Classic specs now. This section should be the last one before the footer, I believe.

I'd like you to add further datasets below it as well, but make it clear and useful. The competing marketplaces can all be fake ones too, as the data here are all fake.

DISCLAIMER: From this section onwards, it's going to be less designed and more of a "this is design your own idea but remember to ask me first how you'd do it."

Transition to an image slideshow with a reveal animation.

However, add a CTA for the user to see the full list of images and gallery.

Transition to CTA with another 3D model transition, this time moving from the side view to the front nose view.

Simply rotate and zoom for this one. Center it on the middle of the screen.

Section E: Enquiry

The text "Give it" comes from the left, fade in, the "A new home" from the right, fade in.

Inquiry form comes by scrolling enough or by clicking on the "Inquire about this car here +" button. It comes via a sidebar.
